IDENTIFIERS	Education Amendments 1974

ABSTRACT

In accord with Section 512 of the Education Amendments of 1974, this report provides fiscal data concerning local distribution of federal funds under state plan programs. The report lists the state administered federal education programs and presents the data collected from the states (in the form of statistical tables) relating to funds available, expenditures, and distribution of grants according to type of recipient, size of grant, or size of local education agency. In addition, the tables correlate grant funds and county income relative to state and national averages and show the percentages of repeating grantees in certain programs. (WD)

JAN 16 1981

Preface

This report represents the fourth annual response of the U.S. Commissioner of Education to the requirements of Section 437 of the General Education Provisions Act. That legislation, enacted by Section 512 of the Education Amendments Act of 1974, instructs the Commissioner to obtain annual reports from the States describing State uses of Federal education funds under the State administered Federal education programs.

Until the enactment of this legislation, the information desired was not easily available for use by the Congress, the Executive Branch, or the general public. With the implementation of Section 437, summaries and analyses of the required information are hereby presented to the Congress as directed. For the convenience of the States, details of all collected data will also be prepared by the U.S. Office of Education, and will be returned to the respondents in usable tabular form for public dissemination by the States.

The necessary data collection and reporting system for the implementation of Section 437 has been developed and made operational through full consultation with the Committee for Evaluation and Information Systems (CEIS) of the Council of Chief State School Officers (CCSSO), by the complete cooperation of the State education agencies and other State agencies, and with the assistance of the National Center for Education Statistics (NCES) and the respective program offices of the U.S. Office of Education (USOE).

Questions about the report may be directed to Mr. Murray Spitzer, Project Officer (Office of Evaluation and Dissemination), at telephone number (202)245-1950.

EXHIBIT II--Annual Changes to List of Formula Grant Programs 6

Exhibit III--State Administered Federal Education Programs (List of 22) 7

1.0 BACKGROUND

1.1 The Information Gap in State Administered Federal Education Programs

The U.S. Office of Education administers approximately 100 programs to provide Federal funds in virtually every aspect of the educational system. During fiscal year 1978, 22 of these programs--about half of the total funding--were administered by the States as "formula grant" programs.

Legislation for a formula grant program defines the various formulas or mechanisms by which the total appropriation is first allocated among States and other direct recipients. Each recipient then further allocates Federal funds to the ultimate intrastate grantees such as local education agencies. Methods of suballocation vary with programs and are specified in law and regulations.

While the formula grant system, with State suballocations, has been an effective and workable funding mechanism, it has not been well designed to feed back information concerning those suballocations. Neither USOE program offices nor the Congress have always been well informed. For some time, the Congress has voiced its concern over this important omission.

Senate Report No. 93-763, March 29, 1974, stated (page 62):

> "One of the major concerns of the Committee has been the continuing inability of the Office of Education to provide fiscal data concerning local distribution of funds under State plan programs. State level allocations are made by the Office of Education, but States are not required to report on their intrastate allotments of funds among local educational agencies. Therefore, Congress is called upon to make decisions about extension and amendments of Federal aid programs in the absence of any information about their existing patterns of distribution.
>
> "The Commissioner has authority under various pieces of legislation to require such reports as he believes necessary to enable him to perform his functions. He has, apparently, not believed timely detailed fiscal data necessary; the Committee believes that they are.
>
> "Therefore, as a part of the administrative consolidation, the Committee bill provides that the Commissioner of Education shall require a report on uses of Federal funds in each State's annual program plan under the programs to which the consolidation applies. That report shall describe the uses of Federal funds expended in that State for the two preceding fiscal years, describe the policies and procedures used by the State educational agency in distributing such funds, and include a statistical report on the children

served or affected by the program during the second preceding fiscal year. In addition, with respect to such year, the report must also include a compilation of reports from local educational agencies within the State, setting forth the amount of Federal funds received by each agency and the purpose for which such funds were expended, plus the data necessary for the statistical report. All reports must be made reasonably available to the public.

> "The Committee hopes that these reporting requirements will aid decision-makers at all levels in making judgments concerning allocations of limited Federal funds. It is the nature of bureaucracies that decisions are made by a number of people who often fail to coordinate their efforts. Each program sets its own criteria for distribution of funds, pursuant to the more general criteria established by legislation. In the absence of comparative data such as those proposed to be required in the reports, unnecessary overlap and duplication in programs and funding can occur. The provision is intended to provide the information base necessary to avoid this to the greatest extent possible."

Comments of the House Education and Labor Committee were similar, as stated in H.R. Report No. 93-805, February 21, 1974, on page 74:

> "The Committee has adopted this amendment because of its concern for accountability in Federal education programs. The Office of Education does not know at this time the aggregate amount that each local school district or each public and private agency in the county received in Federal aid for education. Neither does it know the exact distribution to States and local agencies of the aid it provides under each one of its programs.
>
> "The Committee believes that a beginning in accountability can be made by requiring the Office of Education to be aware of, and to analyze, the impact of its aid on States, on local school districts, and on other public and private agencies. Likewise, States and local agencies should analyze the impact on themselves of Federal educational aid."

1.2 The Legislative Mandate to Provide the Required Information

As shown in the previous section, the Congress recognized that a common "information gap" problem existed in all of the State administered Federal education programs. To correct the problem, Section 512 was included in the Education Amendments Act of 1974; the bill was enacted as Public Law No. 93-380 on August 21, 1974. Section 512 established a new Section 437 of the General Education Provisions Act. The full text of Section 437 (as amended) is shown as Exhibit I. (Public Law 95-561, enacted November 1, 1978, changes the number of Section 437 to Section 406A.)

EXHIBIT I
U.S. Office of Education
Text of Section 437 of the General Education Provisions Act

RESPONSIBILITY OF STATES TO FURNISH INFORMATION

Sec. 437. (a) The Commissioner shall require that each State submit to him, within ninety days after the end of any fiscal year, a report on the uses of Federal funds in that State under any applicable program for which the State is responsible for administration. Such report shall:

(1) list all grants and contracts made under such program to the local educational agencies and other public and private agencies and institutions within such State during such year;

(2) include the total amount of funds available to the State under each such program for such fiscal year and specify from which appropriation Act or Acts these funds were available;

(3) with respect to the second preceding fiscal year, include a compilation of reports from local educational agencies and other public and private agencies and institutions within such State which sets forth the amount of such Federal funds received by each such agency and the purposes for which such funds were expended;

(4) with respect to such second preceding fiscal year, include a statistical report on the individuals served or affected by programs, projects, or activities assisted with such Federal funds; and

(5) be made readily available by the State to local educational agencies and other public and private agencies and institutions within the State, and to the public.

(b) On or before March 31 of each year, the Commissioner shall submit to the Committee on Labor and Public Welfare* of the Senate and to the Committee on Education and Labor of the House of Representatives an analysis of these reports and a compilation of statistical data derived therefrom.

---

* Became the Committee on Labor and Human Resources effective 1978.

2.0 SCOPE OF THE REPORTING REQUIREMENT

The information now being collected and disseminated under the mandate of Section 437 has always been publicly available. However, being scattered through the files of State education agencies, other State offices, and USOE program offices, the data were of limited usefulness.

With the implementation of this reporting system, that information is now not only centralized, but it is also available in computerized form. A major objective of the Congress has been to establish its own capability to review, summarize, and analyze data from the State administered programs. This objective is being realized. Further, an unanticipated bonus is now possible: through computerization of the reporting system, year-to-year analyses are also feasible.

Still further analytical potential is being developed. Of particular significance is use of the ELSEGIS code to identify local education agencies. The ELSEGIS system assigns a unique numeric code to each LEA, as well as FIPS county coding and other identifiers. The FIPS county code in turn permits valuable interactions with other U.S. Government data bases such as those of the Bureau of the Census.

The Section 437 mandate technically requires only that the Commissioner of Education present "an analysis of these (State) reports and a compilation of statistical data derived therefrom," to the Congress. While we are responding literally to this requirement, we are doing much more. For example, the mandate requires that each State make its submitted data publicly available. The combined cost of each State individually developing a system to meet this requirement would be excessively burdensome. It is a routine matter for USOE, however, to provide all of the required data listings, for all States, from the computerized data base. We are doing this.

To recapitulate, the Section 437 system now begins each annual cycle of operation by sending to State respondents a computer-generated data collection list. Respondents complete the required data items and return the form. Each annual collection is processed to prepare a new annual data base. Further processing produces:

- Analytical reports as required
- A longitudinal data base available to the public
- A basis for next year's data collection forms.

2.1 The State Administered Federal Education Programs

The evolution of Federal education legislation is reflected in the changing list of the State administered (formula grant) Federal education programs.

There were 25 such programs for which data were collected in 1975 for the first cycle report. (An additional program--LSCA II--is mentioned in the text, but no data were collected.) Exhibit II shows the subsequent annual changes to this list.

A brief description of each of the 22 programs active during the fourth data collection cycle is given in Exhibit III.

Material for Exhibit III was taken from the 1979 Catalog of Federal Domestic Assistance.

Exhibit II

Annual Changes to List of Formula Grant Programs

Cycle	Programs Dropped	Programs Added
(2) 1975-1976 (26 programs)	1. College Land Grants (Bankhead Jones and Morrill-Nelson Acts)	1. ESEA IV-B 2. ESEA IV-C
(3) 1976-1977 (25 programs)	2. ESEA I-C	
(4) 1977-1978 (22 programs)	3. ESEA II 4. ESEA III 5. ESEA V-A 6. NDEA III	3. VEA Program Improvement
(5) (forthcoming) 1978-1979	7. VEA I-C	4. VEA Advisory Councils
	8. VEA I-D	5. HEA Educational Information Centers
(22 programs)	9. VEA I-G	6. Postsecondary Planning, Sec. 1203(a)
	10. VEA I-H	7. Career Education Incentive Grants
	11. ESEA I-B	8. Preschool Incentive Grants

EXHIBIT III

STATE ADMINISTERED FEDERAL EDUCATION PROGRAMS

Program Title	Program Purpose
Authorizing Legislation: Elementary and Secondary Education Act of 1965, as amended	
Educationally Deprived Children--Handicapped (OMB Cat. No. 13.427)	To extend and improve comprehensive educational programs for handicapped children in State-operated or State-supported schools
Educationally Deprived Children--Migrants (OMB Cat. No. 13.429)	To expand and improve educational programs to meet the special needs of children of migratory agricultural workers or of migratory fishermen
Educationally Deprived Children--State Administration (OMB Cat. No. 13.430)	To improve and expand educational programs for disadvantaged children through assistance to State education agencies, and improvement of their assistance capabilities to local education agencies
Educationally Deprived Children in State Administered Institutions Serving Neglected or Delinquent Children (OMB Cat. No. 13.431)	To expand and improve educational programs to meet the special needs of institutionalized children for whom the State has an educational responsibility
Educationally Deprived Children--Local Education Agencies (OMB Cat. No. 13.428)	To expand and improve educational programs to meet the needs of educationally disadvantaged children in low-income areas whether enrolled in public or private elementary and secondary schools
Educationally Deprived Children--Special Incentive Grants (OMB Cat. No. 13.512)	To provide an incentive for an increase in State and local funding for elementary education in the State
Educational Innovation and Support (OMB Cat. No. 13.571)	To support supplementary educational centers and services, innovative projects, dropout prevention projects, health and nutrition projects, and strengthening of State and local education agencies
Libraries and Learning Resources (OMB Cat. No. 13.570)	Acquisition of school library resources; acquisition of instructional equipment; guidance, counseling, and testing

EXHIBIT III, continued

Program Title	Program Purpose
Authorizing Legislation: Vocational Education Amendments of 1968, as amended	
Vocational Education--Basic Grants to States (OMB Cat. No. 13.493)	To assist in conducting vocational programs for persons of all ages in all communities who desire and need education and training for career vocations
Vocational Education--Special Needs (OMB Cat. No. 13.499)	To provide vocational education programs for persons with academic, socioeconomic, or other social handicaps that prevent them from succeeding in the regular vocational education programs
Vocational Education--Research (OMB Cat. No. 13.498)	To provide research, training, and experimental, developmental, or pilot programs designed to meet special vocational needs of youths, and to disseminate information derived from these projects
Vocational Education--Innovation (OMB Cat. No. 13.502)	To develop, establish, and operate model occupational education programs, with special emphasis to youths who have academic, socioeconomic, or other handicaps
Vocational Education--Consumer and Homemaking (OMB Cat. No. 13.494)	To assist States in conducting training programs in consumer and homemaking education, especially in economically depressed or high unemployment areas
Vocational Education--Cooperative Education (OMB Cat. No. 13.495)	To assist the States in conducting programs of vocational education to prepare students for employment through cooperative work-study arrangements
Vocational Education--Work Study (OMB Cat. No. 13.501)	To assist economically disadvantaged, full-time vocational education students, age 15-20, to remain in school by providing part-time employment with public employers

EXHIBIT III, continued

Program Title	Program Purpose
Vocational Education--Program Improvement and Supportive Service (OMB Cat. No. 13.496)	To assist the States in improving their programs of vocational education and in providing supportive services for such programs
Authorizing Legislation: Adult Education Act, Title III	
Adult Education--Grants to States (OMB Cat. No. 13.400)	To support programs of adult public education that will enable all adults to continue their education to the level of completion of secondary school
Authorizing Legislation: Education of the Handicapped Act, as amended	
Handicapped School and Preschool Programs (OMB Cat. No. 13.449)	To provide grants to States to assist them in providing a free appropriate public education to all handicapped children
Authorizing Legislation: Higher Education Act of 1965, as amended	
University Community Service--Grants to States (OMB Cat. No. 13.491)	To encourage higher education to assist in the solution of community problems by strenthening community service and continuing education programs
Grants to States for State Student Incentives (OMB Cat. No. 13.549)	To make incentive grants to the States to develop and expand assistance to eligible students in attendance at postsecondary institutions
Authorizing Legislation: Library Services and Construction Act	
Library Services--Grants for Public Libraries (OMB Cat. No. 13.464)	To extend public library services to unserved areas, to the physically handicapped, disadvantaged, and limited-English speakers
Library Services--Interlibrary Cooperation (OMB Cat. No. 13.465)	To establish and operate cooperative networks of libraries

2.2 Mandated Elements of Data Collection

The items of data to be collected and reported under Section 437 are broadly described in the legislation; some necessary interpretations have had to be made. Many issues were resolved during the planning study. One major, critical issue still *remains partially* unresolved. This is the definition of expenditure-purpose categories. Associated with the definition is the methodology by which the agreed-upon requirements are communicated to States and, through them, to local education agencies. This unresolved issue is treated in Sec. 2.2.4.

Nevertheless, the pattern of data requirements is clearly implied in the legislation. The mandated requirements may be classified in three groups:

1. State level data--program amounts allocated to each State under each appropriation act (that is, current and carryover amounts);

2. Local level grant data (obligation actions completed by the State during the fiscal year just ended);

3. Local level expenditure and participant data (reports to States of all project actions with respect to grants made during the previous fiscal year).

2.2.1 State Level Appropriation Data

For this year's report, the allocations of fiscal year 1978 appropriation act funds to each State under the 22 programs were obtained from the records of USOE's Division of Planning and Budgeting. Carryover fund amounts were obtained from the States.

2.2.2 Local Level Grant Data

The lists of grants and contracts made during fiscal year 1978 by each State under each of the 22 programs form the structural basis of the Section 437 reporting system. A tentative, computer-generated list of recipient agencies (based on the first cycle data base) was sent to each State. Deletions, revisions, and additions to such lists were made by each State to reflect FY 1978 records.

Grantee identification information consists of three items:

1. An agency type code (LEA, institution, etc.);
2. Agency name;
3. For LEAs only, the nationally standardized ELSEGIS code.

The single data item collected in this grouping for all recipients is the actual grant amount.

2.2.3 Local Level Expenditure and Participant Data

For this year's report, final expenditure and program participant information was reported against grants made by States during FY 1977. Data items are:

1. Final expenditures against grants made in FY 1977;
2. For 14 programs, reports of program participants related to such expenditures;
3. A code identifying type-of-participant data;
4. For ten programs, a breakdown of expenditures by categories of expenditure purpose.

2.2.4 Expenditure-Purpose Data

Paragraph (a)(3) of Section 437 calls for reports by the States not only of program expenditures but also of the purposes of such expenditures.

The first cycle report did not attempt to collect or report fiscal breakdowns of expenditures by program purposes. We began to comply with that requirement of law for the first time in the second cycle, and expanded this level for the third and fourth cycles. We have found that an inordinate effort is required on our part, and also by the States, to do so. For that reason, the current response is limited to ten programs.

Contributing to the difficulty, expense, and burden of this requirement is the necessity for long term planning and coordination with the respondent States. To be able to report the required expenditure-purpose data, States must have first been able to instruct their own grantees and to organize their own internal data collection systems. Even prior to such action, the States must have received notification from USOE program offices of the designated accounting breakdowns. Such designations must also be consistent with other data collection requirements subject to the approval of the Office of Management and Budget under the Federal Reports Act of 1942, or of the Secretary of the Department of Health, Education, and Welfare under Section 400A of the General Education Provisions Act.

Our policy with respect to expenditure-purpose data has been a pragmatic one. We recognized, first, that the current legislation sets no limit on applicable programs; ultimately, we feel, all program-purpose data should be reported, at least until the Congress more closely defines its intent. But we saw immediately that such a data collection would impose an initial heavy burden on State agencies and their local grantees. Accordingly, we decided to phase in the requirement. For the second cycle, only five programs were selected; three were added for the third cycle, and two more for the fourth.

We further recognized that data that have not been generated cannot be collected. To generate expenditure-purpose data suitable for collection, a complex mechanism has to have already been in operation. This mechanism consists of:

(1) A nationally consistent definition of categories of expenditure purpose (preferably as spelled out in the enacting legislation);

(2) Promulgation of the definition by USOE to its grantees--that is, the States;

(3) Acceptance of the definition by States and its communication by States to local grantees;

(4) Design and installation of local and State accounting systems that will generate the data.

When we began to implement Section 437 we found that a suitable mechanism was already in existence. Prior actions of the Office of Management and Budget (Circular A-102) had already established a Government-wide grant reporting system, specifying a universal "Financial Status Report" format. Within DHEW this is Form HEW 601T. The form allows expenditure purposes to be defined as "Programs, Functions, and Activities."

We found that many of the 22 State administered programs were already covered, for our purposes, by the designation of an OMB-approved Financial Status Report, prepared by the cognizant USOE program office. Promulgation of each program's Financial Status Report had served as proper notice to the States of the definition of expenditure-purpose categories. We are therefore successfully using this existing mechanism to ask for the required data.

Even with the structure in place, the actual data collection is a significant share of State burden. Breakdowns of up to 12 categories may be required for an expenditure. In effect, up to 12 additional data items may be required for a single expenditure item. (By comparison, the required grant amount, expenditure amount, participants, and participant code, are four data items.)

2.2.5 Data Collection, Respondents, and Burden Considerations

While Section 437 data deal with local level information, it has been project policy from its inception to work with State level agencies only, and to request only that information which would reasonably be found in State files. Some programs in certain States are administered by State offices outside the State education agency. These were treated as individual respondents. The Bureau of Indian Affairs was treated as a State for seven programs. Data from outlying areas were collected at USOE program offices.

The potential burden on respondents has always been a matter of major concern to USOE. Accordingly, project personnel have worked continuously with the Committee on Evaluation and Information Systems (CEIS) of the Council of Chief State School Officers (CCSSO) to determine the proper data collection requirement.

However, it is in the design of the data collection system that USOE has been able to make distinct contributions to the reduction of potential burden. Names of potential grantees are preprinted on a computer-generated collection form; if valid, no further input is required except new fiscal data. LEAs are coded for positive identification and standardization among multiple program offices in a State.

Additionally, total computerization of the system permits USOE to carry out the requirement for dissemination of all collected data, eliminating a potentially burdensome requirement for the States acting individually.

2.3 The Annual Cycle and Longitudinal Data

With the second report the nature of the annual response to the requirements of Section 437 became evident. The project is now centralizing the collection and dissemination of intrastate information under 22 State administered Federal education programs. In response to the Congressional request for data of the fiscal year just ended, this report summarizes grants obligated during Fiscal Year 1978. In response to the call for data for the second preceding fiscal year, the report summarizes expenditures and participants in projects carried out under grants made in fiscal year 1977.

Not only is this information meaningful in itself: the continuity of such information may be in some ways even more meaningful. The stability of the State administered programs is recognized. Year-to-year project continuity is often desirable, perhaps even mandatory, for program effectiveness. The implementation of Section 437 now makes possible the means of observing, tracing, and analyzing the formerly obscured continuity of program effort. This can be done in at least four ways:

- First, the grant amount reported by the State for fiscal year 1978 will be displayed back to program officials on the fifth cycle data collection forms. To match this amount, program officials will submit a report of expenditures, program participants (where applicable), and expenditure-purpose breakdowns (where applicable)
- Second, appearance of the FY 1978 grantee identification presumes a high probability of a FY 1979 grant also to be reported;
- Third, built-in coding and appropriate ADP methods will allow the continuous appearance of the same grantee agency to be tracked over any number of annual cycles;
- Fourth, use of ELSEGIS coding will allow additional comparisons across all programs for LEA grantees for any year, and such analysis may simultaneously be carried out on a longitudinal basis as well.

2.4 Quality and Accuracy of Collected Data

The heading of Section 437 is: RESPONSIBILITY OF STATES TO FURNISH INFORMATION.

We have accepted this wording as a declaration of Congressional intent, but only as a starting point. Our objective has been to take whatever practical measures are possible to assure that the information reported by this system is fairly representative of State activities.

There are, unfortunately, a number of aspects inherent in the Federal/State/local funding system which make accurate reporting difficult, if not impossible. Funding actions are continuous throughout the year; States independently define their own fiscal years and administrative systems; carryover provisions make it impossible to achieve closure on the tracking of funds. In a conventional accounting sense, there is no way that the Section 437 reporting system can establish control totals for any program in any State. It is even difficult to achieve consistency in the comparison of one State's report with another's.

We recognized these uncontrollable aspects of the Section 437 reporting system in our design of the data collection, data processing, and information reporting systems. Basically, we have accepted as valid any data item submitted to us by any State, with the tacit recognition that it is the responsibility of the State to furnish such information. In general, we have considered it our responsibility to assure that data were accurately entered into the data base as reported, and that the summarized information presented in this report is meaningful and reasonable.

To that end, some editing of submitted data has been performed. In some cases our procedures detected inadvertent errors made by respondents. For example, in several submissions, funds were reported including cents--with the decimal point omitted. Such items if uncorrected would have reported a grant size 100 times the actual amount. In many other cases, preliminary summarized results seemed unreasonable, and data submissions were corrected by direct communication with the respondents.

In one special situation--reporting of commingled State and Federal funds--the data as submitted could not be accepted, and submitted data items were arbitrarily changed for this report. This situation is described in Sec. 3.0.

In general, every data item collected has been verified against its final representation in the data base. This is an unusual, time-consuming, and expensive procedure. However, we believe that the Section 437 report is not a survey in the usual sense, in which an error level is tolerated. It is a report to the Congress of many thousands of specific funding actions by the States. The correct reporting of any grant in any program regardless of funding level is as important as that of any other reporting item. Despite our efforts, some errors will inevitably be found in a data collection of this magnitude. Our objective has been to contain such errors so that these submitted tabular summaries remain meaningful.

3.0 ANALYSIS OF STATE REPORTS AND COMPILATION OF STATISTICAL DATA

Paragraph (b) of Section 437 requires the Commissioner of Education to submit to the Congress an analysis of the State reports and a compilation of statistical data derived from them. The eleven tables presented here will respond to that mandate. Paragraph (a)(5) directs that the State reports be made readily available by each State to local education agencies, institutions, and to the public. As previously noted, USOE will provide this service for the convenience of the States. Usable tabulations of all collected data will be returned to each State for further public dissemination. Additionally, the complete data collection from all States will be made publicly available by USOE in the form of a magnetic tape data base.

The eleven summary tables of this report were designed to satisfy these objectives:

- To show in concise summary form every data item specified in the legislation;
- To permit ready comparisons across all States and programs;
- To display from many perspectives the characteristics of grantees and beneficiaries of the State administered Federal education programs;
- To illustrate the varying administrative policies of the States within their prescribed responsibilities to suballocate Federal funds.

For convenience, the eleven tables have been designed with consistent formats. Columns of any table show State summaries, beginning with the national total; every State appears in the same position in every table. Rows of any table show information by programs, beginning with a summary of all applicable programs. Comparisons may be readily made between tables.

Tables 1-3 summarize all collected data. Table 1 shows the total funds available to each State for each program and compares this figure with the computed sum of grants made during FY 1978. Table 2 shows expenditures reported against grants made in FY 1977, and for ten programs, a breakdown of expenditures by programmatic purpose. Table 3 compares expenditures and program participants for 14 programs.

Tables 4-11 are analytical. Table 4 presents a breakdown of expenditures by type of grantee agency. It shows that 78 percent of all expenditures were made by local education agencies. Recognizing this, Tables 5-9 provide further analyses of grants to and expenditures made by the LEAs alone.

Tables 10 and 11 were added last year. They are based on the "before and after" concept and compare data across two fiscal years.

Table 5 shows by State, for both FY 1977 and FY 1978, the percentages of LEAs receiving grants under 12 LEA-oriented programs. Table 6 shows a distribution of these grants according to size of grant; Table 7 shows another distribution by size of LEA. Tables 8 and 9 attempt to show the distribution of Federal education funds to LEA recipients on a basis of the relative wealth of the recipient population.

Many more States than usual appear to have had difficulty in returning their reports promptly for the fourth cycle. For this reason, we delayed the computer processing cycle closing date by several months. We feel that this delay has been justified, however, since as a result this summary and compilation now includes program reports from all States except Colorado.

For several other reasons a number of gaps will appear in the tables. Many States did not report FY 1977 expenditures or expenditure-purpose data for important programs, although they submitted FY 1978 grant data. In addition, a few individual program reports were not received because of communication problems. However, most of the apparent gaps are there for programmatic reasons. For example, many States did not participate in ESEA I, Educationally Deprived Children, Migrants, or in ESEA I-B, Educationally Deprived Children, Special Incentive Grants. Also, there is wide variation with respect to individual final State reports on the four vocational education programs being phased out in this report.

An adjustment has been made to data submitted by Vermont for VEA I-B, Basic Grants to States. We found late in processing that commingled State and Federal expenditure data had been submitted and have arbitrarily corrected those fiscal 1977 data items by a factor of 3.0.

3.1 Table 1. Funds Available to States, and Grants Made, Under 22 State Administered Federal Education Programs, Fiscal Year 1978.

Table 1 meets the Section 437 mandate to report State level data (Sec. 2.2.1), and grant data for the prior fiscal year (Sec. 2.2.2). This table shows a summary for each State and program in the data collection, a national total for each program, and a State total for all State administered programs. Each State/program summary shows:

1. Fiscal year 1978 appropriation act total as obtained from USOE records;

2. Carryover from fiscal year 1977 as reported by the State;

3. Total available to State (sum of items 1 and 2);

4. Sum of grants made in fiscal year 1978, as developed by the computer system from collected data.

Table 1 shows the usefulness of the carryover provisions of the law. Almost one-fourth of the total amounts appropriated annually are not allocated by the States in the appropriation year. Practices vary by State and program.

3.2 Table 2. Expenditures Under 21 State Administered Federal Education Programs, By Purpose of Expenditure for Ten Programs, Fiscal Year 1977

Table 2 meets the Section 437 mandate to report expenditure data against grants made in the second preceding fiscal year, for all programs, and to report purposes of those expenditures (eight programs only).

Column headings of Table 2 report data by States and as such are consistent with other tables. Within each column, however, two items are reported: actual expenditure in thousands of dollars, and a percentage figure.

For programs not showing breakdowns, the percentage figure is not applicable. For the eight programs showing breakdowns, the percentage is a proportion of total expenditures.

Breakdown amounts and percentages will not always add to a total. In some States or programs the breakdown amounts were either budgeted or estimated, rather than actual. In most cases such submissions were accepted as reported.

We have computed an unallocated amount for eight programs by subtracting the sum of the fiscal breakdown amounts from the total expenditures figure reported separately. If the unallocated amount was negative, it has been reduced to zero.

3.3 Table 3. Expenditures and Participants Under 14 State Administered Federal Education Programs, Fiscal Year 1977

Table 3 completes the mandated requirements of Section 437. In response to Paragraph (a)(4), to "include a statistical report on the individuals served or affected . . . ," Table 3 shows program participants as reported by States for 14 programs for which such data are most meaningful.

The participant count as reported is considered "soft" data, as contrasted with funding data which presumably represents a "hard" dollar amount. For this reason there was reluctance to develop this item any further. We find, however, that while any individual participant count may be a questionable figure, the State total tends to be a much more usable figure. We have therefore used the participant data to develop a State summary "dollars per participant" ratio. However, caution is suggested in making comparisons among States or programs since individual State definitions of participant count may vary substantially.

3.4 Table 4. State Percentage and Dollar Amount Distributions of Grants Under 18 Federal Education Programs, By Type of Recipient Agency, Fiscal Year 1978

The Section 437 project defines six major types of grantee agency: local education agencies, institutions, intermediate administrative agencies, State agencies, universities, and public libraries. The bulk of the grants and funds goes to local education agencies. However, the distribution variances among agency types by State and program may provide useful information. Table 4 is developed directly from a tabulation of the collected data.

3.5 Table 5. State Percentages of LEAs Receiving Grants Under 12 LEA-Oriented Federal Education Programs, Fiscal Years 1977 and 1978

Table 5 shows by State, for both FY 1977 and FY 1978, the percentages of LEAs receiving grants under 12 LEA-oriented programs. Percentages were developed from the data collection by counting all LEAs in a State reporting either grants for FY 1978 or expenditures against FY 1977 grants.

To some extent the figures will be distorted as a result of accepted practice. In some programs several smaller LEAs may work together under a State grant awarded to an intermediate administrative agency. Such data are not coded as LEA grants and cannot be included in the analysis.

3.6 Table 6. State Percentage Distributions of the Number of Grants and Federal Funds Under 12 LEA-Oriented Programs, By Size of Grant, Fiscal Year 1978

Table 6 shows the distribution of grants under 12 LEA-oriented programs according to the size of grant. It provides some information to show the variances in distribution for a particular program, across States. Table 6 will also show whether there is a concentration of funds among a few large grantees or a more widely dispersed distribution among many grantees.

The 12 LEA-oriented programs are those listed in Table 5. This table shows, first, totals for those 12 programs; below the total distribution, individual program distributions for six of the more heavily funded programs with heavy LEA orientation.

3.7 Table 7. State Percentage Distributions of the Number of Grants and Federal Funds Under 12 LEA-Oriented Programs, By Size of LEA, Fiscal Year 1978

Table 7 shows the percentage distribution of grants and dollar amounts under 12 LEA-oriented programs, according to the size of the recipient local education agency. This analysis permits comparisons of variances in distribution policies among States and programs.

Note that the 12 LEA-oriented programs are those listed in Table 5. Table 7 shows, first, totals for the group of 12 programs. Following the totals, Table 7 shows detailed program distributions for the nine largest programs among the 12.

3.8 Table 8. State Percentage Distributions of LEA Grant Funds Under 12 Federal Education Programs, By County Income Relative to State Average, With Corresponding Population Percentages, Fiscal Year 1978

The Congress has repeatedly manifested its concern with the educational needs of individuals from low-income families as well as those residing in low-income areas. The State administered Federal education programs are generally designed to attempt to meet such special educational needs. In Tables 8 and 9 we are endeavoring to demonstrate analytically the extent to which those Congressional objectives are being met.

Such an analysis has to overcome a severe initial handicap: about 78 percent of the funds allocated by the State administered programs go to LEAs, but there is no nationally consistent statistical data showing a measure of wealth for LEAs.

However, there does exist a current data base, prepared by the Bureau of the Census for Federal revenue sharing allocations, which shows county population and county per capita income. As previously noted, the Section 437 data base now shows, for LEA records, the county in which the LEA is located. These circumstances permit the development of an approximate methodology which we have used in the production of Tables 8 and 9.

The methodology is as follows:

Within each State, each county was compared with the State average per capita income. Each county was then ranked as being either a "wealthier" area (above the State average) or an "other" area (below the State average). Data from each identifiable LEA grant were then accumulated by county.

In many States there will be more than one LEA in a county; however, under this methodology, any LEA would move that county's total population into the summary for either "wealthier" or "other" populations. As a result, some distortion was inevitable.

Another distortion in this analysis could not be overcome because of the concentrations of population and wealth of the counties in a State. This causes the analysis to show that a disproportionately high percentage of the population lives in "wealthier" areas! The example below explains this curious phenomenon of data:

Illustrative Example

County	Population	Per Capita Income	Wealth $(000)	Category
1	50,000	$ 2,000	100,000	"Other"
2	100,000	2,100	210,000	"Other"
3	150,000	2,200	330,000	"Other"
4	200,000	2,300	460,000	"Other"
5	1,000,000	$ 2,500	2,500,000	"Wealthier"
	1,500,000 (Total)	$ 2,400 (AVG)	3,600,000 (Total)	

Note that the weighted average per capita income is $2,400. The first four counties have lower figures; they are therefore "other" (that is, less wealthy). Only the populous fifth county has a per capita income above the State average. But in this analysis, then, two-thirds of the State's population live in "wealthier" areas. This phenomenon is consistently seen in Tables 8 and 9.

Understanding this unexpected effect, the tables may then be examined to yield very useful data. The population percentages in any given State/program report will not always add to 100, if not all counties received the minimum of one grant. The percent of program dollars will always add to 100 since all grant data items are attributed to a county summary grouping.

To interpret the data shown in Tables 8 and 9, consider the example below:

Illustrative Example

	Percent of State POPN	Percent of PGM $
Any LEA-Oriented Program		
ALL LEAs IN WEALTHIER COUNTIES	75	65
ALL LEAs IN OTHER COUNTIES	20	35

In this example (typical of the analysis) one or more grants went to certain wealthier counties, representing 75 percent of the State's population. Other grants went to certain less wealthy counties, representing 20 percent of the State's population. Counties representing 5 percent of the State's population received no grants.

But the funds distribution was disproportionately high in favor of the less wealthy counties, because the less wealthy 20 percent of the State's population received 35 percent of program funds, while the wealthier 75 percent of the population received only 65 percent of total program funds.

3.10 Table 10. Percentages of Repeating Grantees Under 12 State Administered Federal Education Programs, Fiscal Years 1977 and 1978

A characteristic of the State administered programs is their year-to-year stability in terms of grantees. Table 10 shows, for 12 programs, the percentages of repeating grantees by State and program.

The repeating grantee percentage is shown in two ways for each program. The left portion of each data column (labelled 1977) shows the percentage of FY 1977 grant recipients also receiving grants in FY 1978. The right portion of each data column (labelled 1978) shows the percentage of FY 1978 recipients that were also recipients in FY 1977. These percentages are not identical; under some circumstances they may differ widely. The illustrative example following explains how this may occur.

Assume that for a given program, a State awarded ten grants in FY 1977. Assume further that in FY 1978, nine of the original ten grantees received another grant, and that six new recipients were also awarded grants.

The percentage of repeating grantees for FY 1977 is calculated as 9/10, or 90 percent. The percentage of repeating grantees for FY 1978 is calculated as 9/15, or 60 percent.

3.11 Table 11. Percentages of Expenditures Reported Against FY 1977 Grants Under 16 Federal Education Programs, Fiscal Year 1977

This table illustrates a limitation in the "before and after" reporting concept mandated by Section 437--the inability of the system to match reports of expenditures against prior year reports of grants. For the 16 programs included in Table 11, the U.S.A. total match of expenditures to prior grant amounts is 87 percent.

This discrepancy in expenditure reporting is not surprising. Much of it is probably due to inherent delays in financial reporting systems within SEAs and LEAs. Other contributing factors include:

1. Reports not submitted by SEAs.
2. Partial or incomplete reports of expenditures from LEAs to SEAs.
3. Errors or changes in prior year grant amounts previously reported.
4. Errors in current year expenditure amounts.

Given sufficient time, many of these discrepancies would be resolved. However, since the Section 437 system must operate within fixed time limitations, the observed discrepancies will probably continue to occur.

317
